

Hierarchical Semantics of Objects (hSOs)

Devi Parikh and Tsuhan Chen, Department of Electrical and Computer Engineering, Carnegie Mellon University

What is an hSO?

Goal

Images from a scene \Rightarrow Corresponding hSO

UNSUPERVISED !

Motivations

- Higher level understanding of the scene
- Compact scene representation
- Context
- Avoid extensive human labeling – let the data speak!

Contributions

- LEARNING:** Unsupervised learning of hSO
- APPLICATION:** Using hSO for robust object detection

LEARNING: Approach

Input

Feature extraction

Geometrically consistent correspondences

[Leordeanu, ICCV 2005]

Feature selection

Did not find correspondences in enough images

Did not find geometrically consistent correspondences

Split-n-merge clustering

Interaction among feature pairs

Recursive clustering ?

LEARNING: Results

30 Input Images

Results

25 Input Images

Results

30 Input Images

Results

APPLICATION

run individual detectors

context by \square refined + detector

detector

detector + context

Conclusion

- Identify foreground
- Separate foreground into multiple objects
- Learn interactions among objects
- Infer hierarchical semantics among objects
- Learn models for objects
- Use models & semantics for robust object detection

UNSUPERVISED!
