

Visual Analytics 1

CS 7450 - Information Visualization
November 18, 2013
John Stasko

Agenda

- Today
 - Overview of what the term means and how it relates to information visualization
 - Some example VA research projects
- Next time
 - Specific example, Jigsaw, helping investigative analysis
 - Related systems

Acknowledgment

Slides looking like this provided
courtesy of Jim Thomas

CS 7450

3

Visual Analytics

- A new term for something that is familiar to all of us
- Informal description:
 - Using visual representations to help make decisions
 - Sounds like infovis, no?

Fall 2013

CS 7450

4

Before There was VA

- Growing concern from some that infovis was straying from practical, real world analysis problems
- Infovis typically not applied to massive data sets
- Infovis “competes” with other computational approaches to data analysis
 - Statistics, data mining, machine learning

Important Paper

- Shneiderman suggests combining computational analysis approaches such as data mining with infovis – Discovery tools
 - Too often viewed as competitors in past
 - Instead, can complement each other
- Each has something valuable to contribute

Alternatives

- Issues influencing the design of discovery tools:
 - Statistical Algorithms vs. Visual data presentation
 - Hypothesis testing vs. exploratory data analysis
- Pro's and Con's?

Fall 2013

CS 7450

7

Differing Views

- Hypothesis testing
 - Advocates:
By stating hypotheses up front, limit variables and sharpens thinking, more precise measurement
 - Critics:
Too far from reality, initial hypotheses bias toward finding evidence to support it
- Exploratory Data Analysis
 - Advocates:
Find the interesting things this way, we now have computational capabilities to do them
 - Skeptics:
Not generalizable, everything is a special case, detecting statistical relationships does not infer cause and effect

Fall 2013

CS 7450

8

Recommendations

- Integrate data mining and information visualization
- Allow users to specify what they are seeking
- Recognize that users are situated in a social context
- Respect human responsibility

Further Questions

- Are information visualizations helping with exploratory analysis enough?
- Are they attempting to accomplish the right goals?

Another Important Paper

- Information visualization systems inadequately supported decision making:
 - Limited Affordances
 - Predetermined Representations
 - Decline of Determinism in Decision-Making
- “Representational primacy” versus “Analytic primacy”
 - Telling the truth about your data versus providing analytically useful visualizations

Amar & Stasko
InfoVis '04 Best Paper
TVCG '05

Fall 2013

CS 7450

11

Task Level

- Don't just help “low-level” tasks
 - Find, filter, correlate, etc.
- Facilitate analytical thinking
 - Complex decision-making, especially under uncertainty
 - Learning a domain
 - Identifying the nature of trends
 - Predicting the future

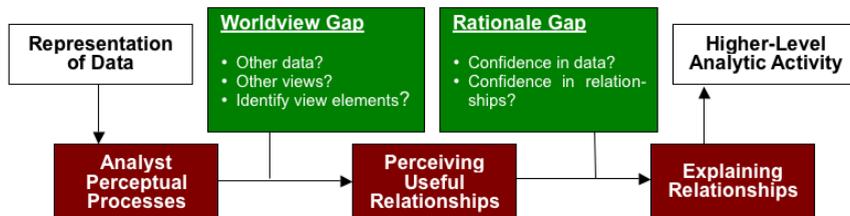

Fall 2013

CS 7450

12

Analytic Gaps

- Analytic gaps – “obstacles faced by visualizations in facilitating higher-level analytic tasks, such as decision making and learning.”
 - Worldview Gap
 - Rationale Gap

Fall 2013

CS 7450

13

Knowledge Precepts

- For narrowing these gaps
 - Worldview-Based Precepts (“Did we show the right thing to the user?”)
 - Determine Domain Parameters
 - Expose Multivariate Explanation
 - Facilitate Hypothesis Testing
 - Rationale-Based Precepts (“Will the user believe what they see?”)
 - Expose Uncertainty
 - Concretize Relationships
 - Expose Cause and Effect

Fall 2013

CS 7450

14

Application of Precepts

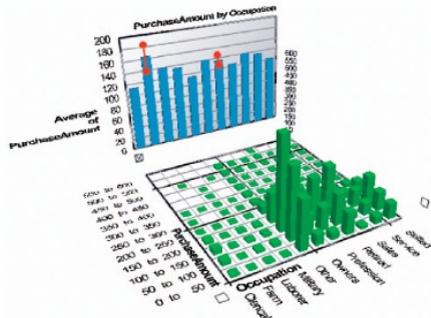

Fig. 2. Error bars (which we have added in red) would be a simple way to increase confidence in the degree of difference between two aggregations. (Picture taken from the Seelt system by Visible Decisions, Inc.)

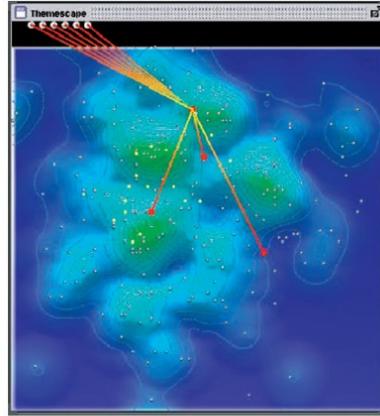

Fig. 3. This themescape variation allows documents with missing metadata, shown as dots in the upper black region, to participate in analysis, such as the reference relationship shown. (Picture courtesy of Nicholas Diakopoulos.)

Fall 2013

CS 7450

15

Application of Precepts

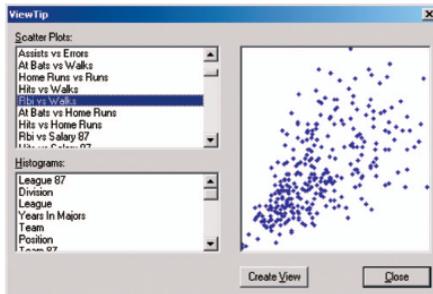

Fig. 4. The View Tips in SpotFire Pro 4.0 allow users to quickly examine possible sources of correlation for further examination.

Fig. 5. IN-SPiRE uses horizontal scrolling to navigate time slices of user-defined content groups. (Picture produced at and provided with permission of Pacific Northwest National Laboratory, which is managed and operated by the Battelle Memorial Institute on behalf of the US Department of Energy.)

Fall 2013

CS 7450

16

More Motivation

- Increasing occurrences of situations and areas with large data needing better analysis
 - DNA, microarrays
 - 9/11 security
 - Business intelligence

Fall 2013

CS 7450

17

Articulating the Motivation

Articles

- 2014 DHS Scientific Leadership Award
- 2011 Data Sciences Summer Institute
- 2011 University Summit in March
- City College of NY Receives DHS Grant to Study Crime and Facial Recognition
- New Outreach Feature on US Community Website
- Purdue Wins the Big Ten Police Chief's Conference

Visual Analytics Video

VisualMaster: Visual Analytics—Mastering the Information Age

The VisualMaster team has released a video on Visual Analytics. This 7:30 minute video outlines the importance of funding research in this new domain. It discusses and demonstrates the benefit of using computational analysis techniques coupled with interactive visualization tools to address the issue of massive, dynamic sets of data in fields such as business, banking and health.

The example used to help the relevance of visual analytics tools is one of epidemiology. In the video health experts are portrayed with a large amount of information to explore in order to assess the cause of a disease in a region, and possible responses to this disease.

Through the use of visual analytics tools, these experts are able to quickly and easily query their data. With the expert having control of the exploration, they can interact with the query—adding, adjusting and reanalyzing the results displayed on an easy-to-understand visual representation.

The video highlights the many benefits visual analytics tools can provide to decision makers in various fields. These tools can facilitate better memory of complex processes, improve the management of large datasets, and provide real-time visual displays of such data. All with the human in charge of the analysis.

For more information on the European project VisualMaster, visit www.visualmaster.eu

The VisualMaster video is available [here](#) or on [YouTube](#)

Fall 2013

CS 7450

18

History

- 2003-04 Jim Thomas of PNNL, together with colleagues, develops notion of visual analytics
- Holds workshops at PNNL and at InfoVis '04 to help define a research agenda
- Agenda is formalized in book *Illuminating the Path*, shown on next slide

Fall 2013

CS 7450

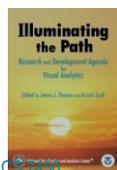

19

Visual analytics is the science of analytical reasoning facilitated by interactive visual interfaces.

People use visual analytics tools and techniques to

- Synthesize information and derive insight from massive, dynamic, ambiguous, and often conflicting data
- Detect the expected and discover the unexpected
- Provide timely, defensible, and understandable assessments
- Communicate assessment effectively for action.

Thomas & Cook
2005

**“The beginning of knowledge is the discovery of something we do not understand.”
~Frank Herbert (1920 - 1986)**

Visual Analytics

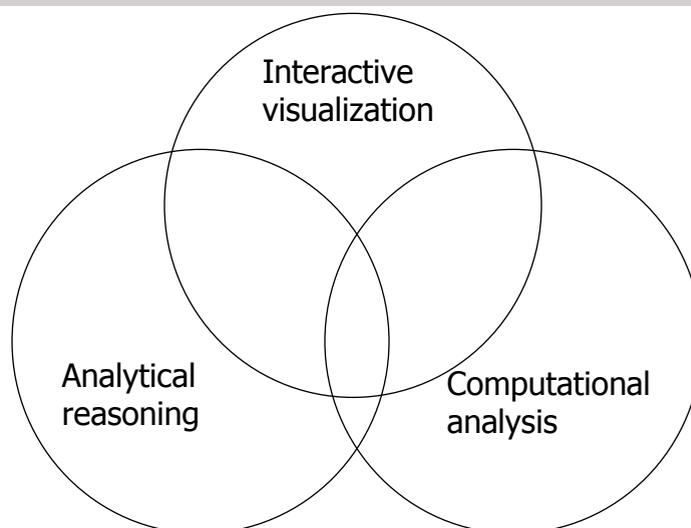

- Not really an “area” per se
 - More of an “umbrella” notion
- Combines multiple areas or disciplines
- Ultimately about using data to improve our knowledge and help make decisions

Fall 2013

CS 7450

21

Main Components

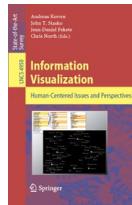

Fall 2013

CS 7450

22

Alternate Definition

- Visual analytics combines automated analysis techniques with interactive visualizations for an effective understanding, reasoning and decision making on the basis of very large and complex data sets

Keim et al, chapter in *Information Visualization: Human-Centered Issues and Perspectives*, 2008

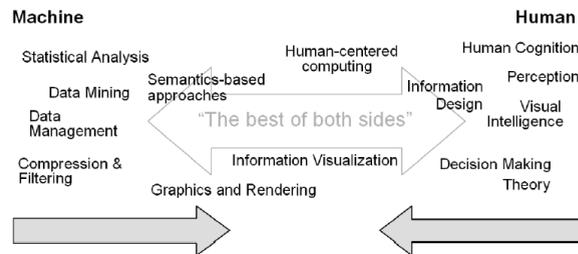

Fall 2013

CS 7450

23

Synergy

- Combine strengths of both human and electronic data processing
 - Gives a semi-automated analytical process
 - Use strengths from each

From Keim

Fall 2013

CS 7450

24

InfoVis Comparison

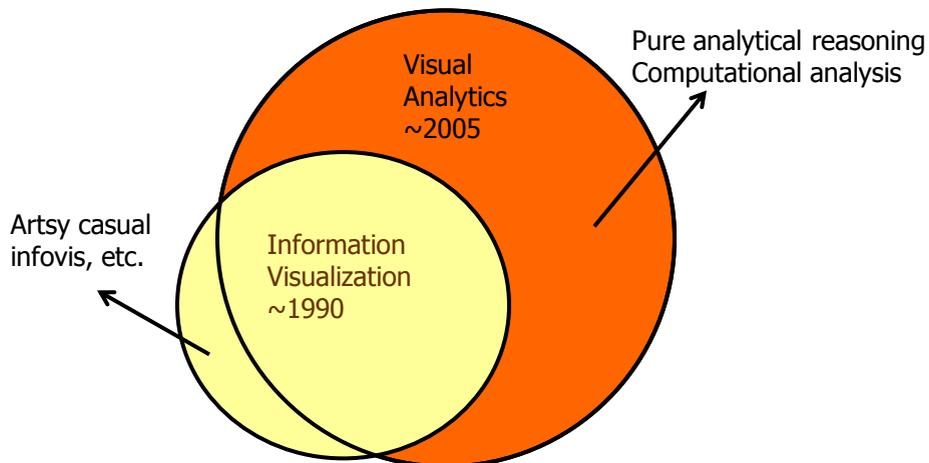

- Clearly much overlap
- Perhaps fair to say that infovis hasn't always focused on analysis tasks so much and that it doesn't always include advanced data analysis algorithms
 - Not a criticism, just not focus
 - InfoVis has a more narrow scope
 - (Some of us actually do believe that infovis has/should include those topics)

Fall 2013

CS 7450

25

Academic Context

Fall 2013

CS 7450

My interpretation

26

Visual Analytics

- Encompassing, integrated approach to data analysis
 - Use computational algorithms where helpful
 - Use human-directed visual exploration where helpful
 - Not just “Apply A, then apply B” though
 - Integrate the two tightly

Fall 2013

CS 7450

27

Domain Roots

- Dept. of Homeland Security supported founding VA research
- Area has thus been connected with security, intelligence, law enforcement
- Should be domain-independent, however, as other areas need VA too
 - Business, science, biology, legal, etc.

Fall 2013

CS 7450

28

VA-related Research Topics

- Visualization
 - InfoVis, SciVis, GIS
- Data management
 - Databases, information retrieval, natural language
- Data Analysis
 - Knowledge discovery, data mining, statistics
- Cognitive Science
 - Analytical reasoning, decision-making, perception
- Human-computer interaction
 - User interfaces, design, usability, evaluation

Fall 2013

CS 7450

29

- **Statistics, data representation and statistical graphics**
- **Geospatial and Temporal Sciences**
- **Applied Mathematics**
- **Knowledge representation, management and discovery**
 - Ontology, semantics, NLP, extraction, synthesis, ...
- **Cognitive and Perceptual Sciences**
- **Communications: Capture, Illustrate and present a message**
- **Decision sciences**
- **Information and Scientific Visualization**

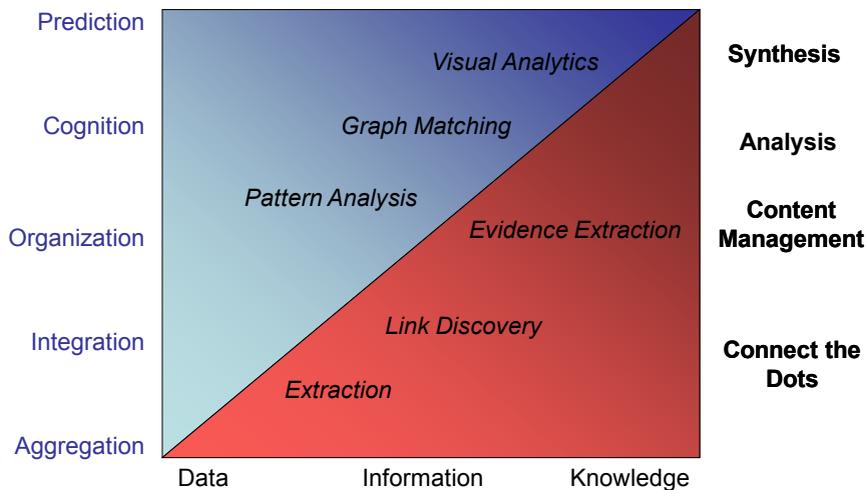

And far more than homeland security

CS 7450

30

Multiple Techniques Contribute to Threat Assessment

CS 7450

31

Uses Today

- **Scientific Research**
- **Regulatory and Legal Communities**
- **Intelligence Analysis**
- **DOE and DOD**
- **Market Assessments**
- **Capability Analysis - Resumes**
- **Medical and Pharmaceutical Communities**
- **National Security and Law Enforcement**
- **Information Assurance, Web Analytics**
- **Technology Scanning, Asset and Intellectual Property Management**

CS 7450

32

Capabilities Desired

- **Reduce the threat of terrorism** through the invention, development, evaluation, and deployment of technology to analyze masses of data in different formats and types, from different sources, with highly varying degrees of confidence levels, within time frames required for rapid decision making.
- **Better understand the risks and vulnerabilities of our critical infrastructures**, trade, ports, and immigration by combining sensor, computational and visual analytics technologies for in-the-field and strategic decision making.
- Enable **rapid visual communication technology for response teams** for clear understanding of the situation assessment and alternate options for response with geospatial, and multi-jurisdictional situations for WME and natural disasters.
- Ensure **effective information communication methods** and technologies throughout DHS missions of analysis, risk, levels of alerts, and response, in unwrappable levels of assessment with evidence and communication styles aimed within audience-centric applications for rapid understanding and action.
- Provide an **enduring talent base** of educated professionals supporting future developments requiring visual communication of integrated information and operational support missions.

33

Research Agenda

- Available at <http://nvac.pnl.gov/> in PDF form
- At IEEE Press in book form
- Special thanks to IEEE Technical Committee on Visualization and Graphics

CS 7450

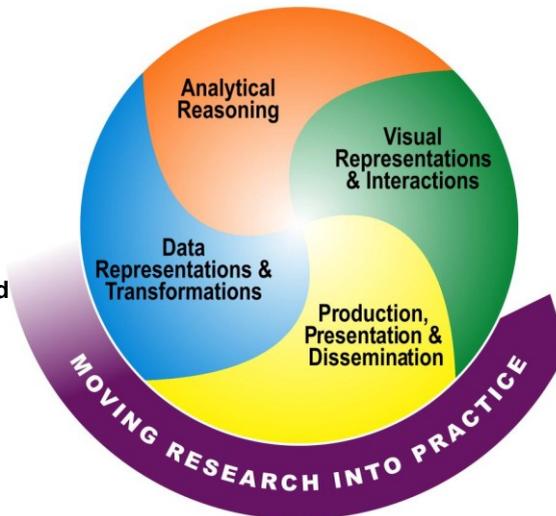

34

Overview of the R&D Agenda

- Challenges
- Science of Analytical Reasoning
- Science of Visual Representations and Interactions
- Data Representations and Transformations
- Production, Presentation, and Dissemination
- Moving Research Into Practice
- Positioning for an Enduring Success

CS 7450

More History

- European Union has become very active in visual analytics area
 - VisMaster project

Fall 2013

CS 7450

36

Vision of the Future

- PNNL Precision Info Environments (PIE) video
- Emergency response scenario

<http://precisioninformation.org>

Fall 2013

CS 7450

37

Projects

- Let's look at some of the research projects in this area

Fall 2013

CS 7450

38

WireVis

Chang et al
Information Visualization '08

- Another VA investigative analysis project
- Helping Bank of America examine wire transfers of money
- Want to detect fraud and illegal actions

Thanks to R. Chang
for some slide content

Fall 2013

CS 7450

41

Particulars

- Who – Bank analysts
- Problem – Detect money laundering and fraud in wire transfers of money
- Data – Electronic records of wire transactions and information associated with each

Fall 2013

CS 7450

42

Background

- Wire transfers of money can be complex
 - Have a “from” and “to” but often many “middlemen”
 - May not know who intermediaries are
- Millions of transfers per day occur
 - Vast majority are legal
- Bank has legal responsibility to report suspicious activities

Fall 2013

CS 7450

43

Data

- Each transaction:
 - Money amount
 - Payer (could be third party)
 - Payee (could be an agent)
 - Potential intermediaries
 - Addresses of payer and payee, instructions, additional comments are optional

Fall 2013

CS 7450

44

Challenges

No Standard Form...

When a wire leaves Bank of America in Charlotte...

The recipient can appear as if receiving at London, Indonesia or Singapore

Vice versa, if receiving from Indonesia to Charlotte

The sender can appear as if originating from London, Singapore, or Indonesia

Fall 2013

CS 7450

45

Challenges

- Scale: BoA may do 200k transfers per day
- No international standard: loosely structured data
- Bad guys are smart and one step ahead
 - Detection tools are always reactive

Fall 2013

CS 7450

46

Existing Detection

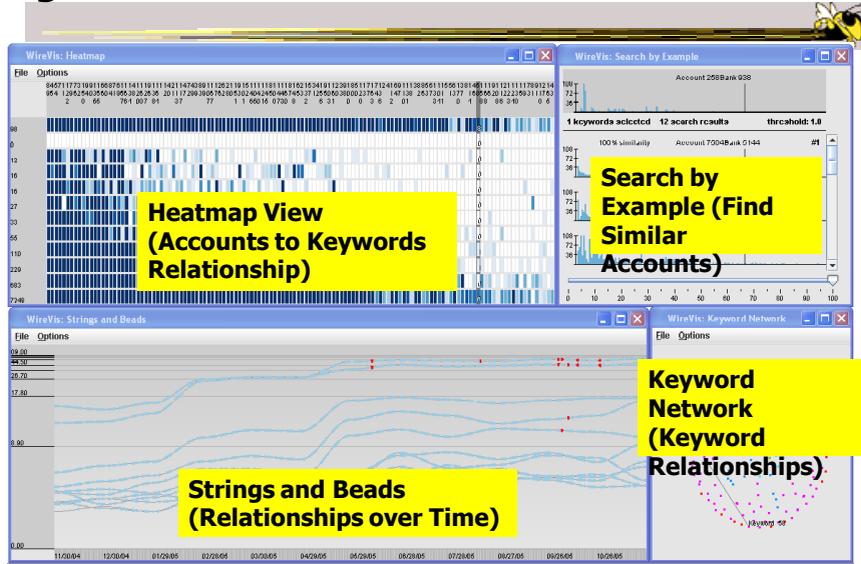

- Examine for certain temporal patterns of activity
- Look for keywords in free text
 - Filter transactions based on these highly secretive words
 - Typically a few hundred
 - Updated based on intelligence reports

Current Practices

- Load transactions into large relational DB
- Download some amount to spreadsheets via filtering based on keywords, amounts, dates, ...

- Can only look at a week or two this way
- Difficult to notice temporal patterns

System Overview

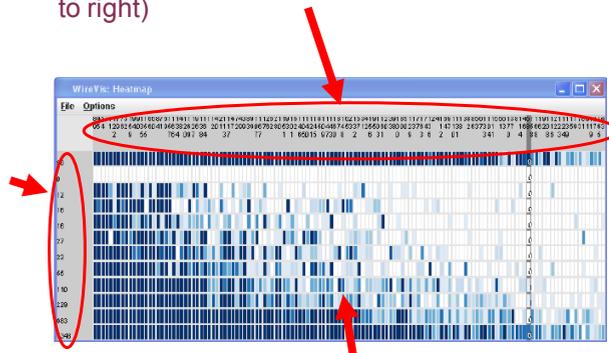

Fall 2013

CS 7450

49

Heatmap View

- ▶ List of Keywords
- ▶ Sorted by frequency from high to low (left to right)
- ▶ Hierarchical clusters of accounts
- ▶ Sorted by activities from big companies to individuals (top to bottom)
- ▶ Fast "binning" that takes $O(3n)$
- ▶ Number of occurrences of keywords
- ▶ Light color indicates few occurrences

Fall 2013

CS 7450

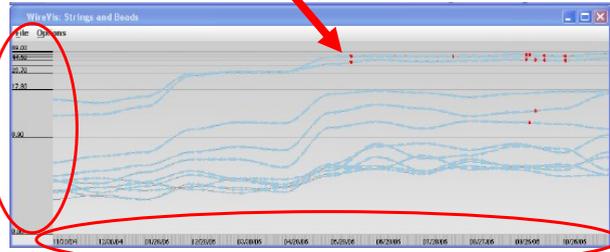

50

Strings and Beads

- ▶ Each string corresponds to a cluster of accounts in the Heatmap view
- ▶ Each bead represents a day

- ▶ Y-axis can be amounts, number of transactions, etc.
- ▶ Fixed or logarithmic scale

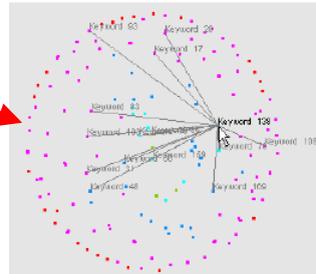

▶ Time

Keyword Network

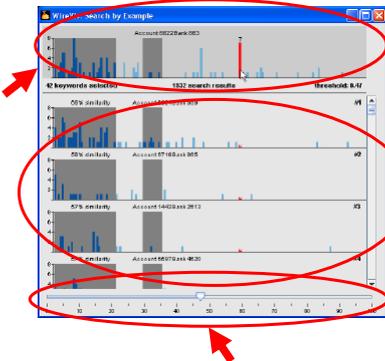

- Each dot is a keyword
- Position of the keyword is based on their relationships
 - Keywords close to each other appear together more frequently
 - Using a spring network, keywords in the center are the most frequently occurring keyword
- Link between keywords denote co-occurrence

Search By Example

- ▶ Target Account
- ▶ Histogram depicts the occurrences of keywords
- ▶ User interactively selects features within the histogram

- ▶ Accounts that are within the similarity threshold appear ranked (most similar on top)

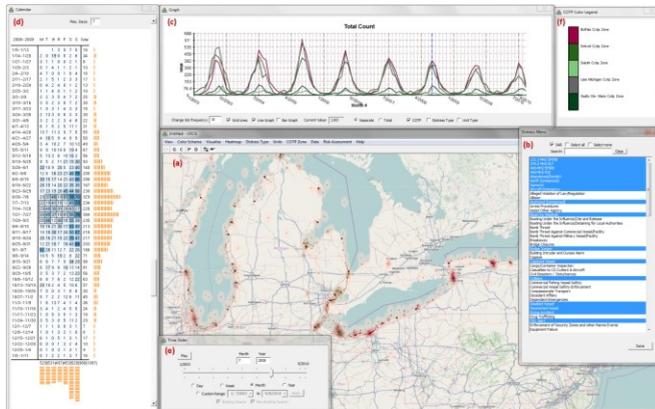

▶ Similarity threshold slider

Fall 2013

CS 7450

53

Coast Guard Search & Rescue Video

Shows stations, incidents, response times

Visualize historical data and support "what if" explorations

Calculate risk assessments and then communicate visually

Malik et al
VAST '11

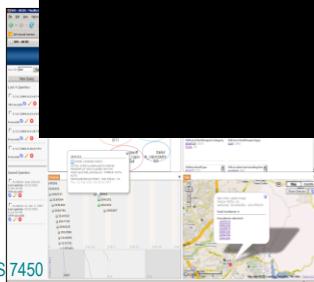

Fall 2013

CS 7450

54

Other Examples

Many Others

- A number of nice examples shown earlier on Graph & Network visualization day
 - Wong: Graph Signatures
 - Perer: Social Action
 - etc.

HW 7

- Be an intelligence analyst
 - Use Jigsaw (available on web)
 - Documents on t-square
- Turn in: Your paragraph description of “threat” + process description (and any materials you want to submit)
- Due Tuesday 26th @ 4pm
 - 1 hardcopy, not email

Demo on
Weds.

HW 6

- Visualize product reviews
 - What we noticed
 - Some examples
 - Things to think about...

Upcoming

- Visual Analytics 2
 - Reading
 - Stasko et al '08

- Time Series Data
 - Reading
 - Aigner et al '08
